I am writing to apply for the Head of Production role at Motor-Elektrik BVS GmbH. Your focus on digitalizing production processes, introducing meaningful KPIs, and transitioning from reactive to proactive planning resonates with my own approach to building efficient, data-driven systems.

Although my professional experience is rooted in software engineering and system architecture, the core skills required for this roleâ process analysis, workflow automation, technology evaluation, and cross-functional coordinationâ are ones I have applied daily. I have spent years designing and optimizing complex systems, identifying weak points, and implementing solutions that improve reliability and throughput.

One area that particularly interests me is the challenge of moving production planning from reactive to forward-looking. In my own work, I have built real-time monitoring dashboards and automated scheduling systems that give teams visibility into current status and predictive insight into future bottlenecks. I approach KPIs the same way: as practical tools for steering decisions, not just numbers on a report.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am confident I can bring structure, digital thinking, and a hands-on mindset to your workshop. I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to Motor-Elektrik BVS GmbH.

Sincerely,

Md Shahanur Islam Shagor
