I am writing to apply for the Design System Designer (m/w/d) position at fluege.de. The opportunity to shape a shared design language for one of Germany's leading flight portals is compelling, and I am interested in contributing to a platform that makes travel booking intuitive and consistent.

Through my professional experience as a full-stack developer, I have built and maintained scalable, component-based user interfaces using React, Next.js, and Tailwind CSS. I understand how design systems function not just as visual libraries but as structural foundations that enable teams to ship faster and more consistently. I am comfortable working with Figma to translate design tokens, variables, and component properties into production-ready UI code.

One area that particularly interests me is the collaboration between design and development. In previous projects, I worked closely with frontend teams to ensure that design components were implemented accurately and consistently across web and mobile platforms. I also have experience establishing governance processes, versioning, and documentation to keep design systems maintainable as they scale.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the chance to discuss how my background in building consistent, scalable UI systems can support the fluege.de team.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
