I am writing to apply for the Clinical Research Associate II position at i-Pharm Consulting. While my professional background is in software engineering and AI systems, the analytical rigor, data management discipline, and process-oriented mindset I have developed are directly transferable to clinical research operations.

In my work as a full-stack developer, I have built and maintained systems that demand high data integrity, real-time monitoring, and precise reporting. For example, I developed a real-time server health monitoring dashboard using Node.js, Socket.IO, and Docker that tracked availability, latency, and system metrics across multiple endpoints. This required careful attention to data accuracy, consistent logging, and the ability to identify anomalies quicklyâ skills that align closely with the monitoring and documentation responsibilities of a CRA.

I also have experience managing complex workflows involving multiple stakeholders, secure data handling, and compliance with structured protocols. Building role-based access control systems, audit trails, and automated reporting pipelines has given me a strong foundation in ensuring data quality and regulatory adherence.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am eager to bring my analytical discipline, attention to detail, and commitment to data integrity to the CRA II role at i-Pharm Consulting. I have attached my CV for your review and welcome the opportunity to discuss how my background can contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
