I am writing to apply for the FX Dealer position at RBC. While my professional background is in software engineering, I bring strong analytical and organizational skills that align well with the operational and compliance-focused responsibilities of this role.

Through my work on financial technology projects, I have developed a detail-oriented approach to data management, transaction processing, and reporting. For example, I built an AI-powered financial application that handles transaction records, generates PDF reports, and integrates with AWS services for secure data handling and communication. This required precision, adherence to timelines, and the ability to manage multiple data streams simultaneously.

One area that particularly interests me is the emphasis on compliance and risk monitoring in this role. In my development work, I have implemented role-based access control, authentication systems, and secure data pipelines, which have given me a strong understanding of the importance of regulatory adherence and operational integrity. I am comfortable working with systems that require accuracy, validation, and escalation of issues when needed.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am confident that my analytical mindset, organizational discipline, and ability to adapt to new systems will allow me to contribute effectively to the FX Dealer role at RBC. I have attached my CV for your review and welcome the opportunity to discuss how my background can support your team.

Sincerely,

Md Shahanur Islam Shagor
