I am writing to apply for the Senior SEA Manager position at hurra.com. Your focus on combining deep performance marketing expertise with AI, automation, and proprietary technology development is a compelling approach. The opportunity to shape the next generation of paid search through data-driven strategies and new platforms like ChatGPT Ads aligns with my background in building intelligent, automated systems.

My professional experience has centered on developing scalable web applications and integrating AI-powered features to solve real-world problems. I have built systems that automate complex workflows, process data in real time, and deliver measurable outcomes. This technical foundation gives me a practical understanding of how data, automation, and AI can create performance advantages in digital marketing environments.

In previous work, I developed an AI-powered financial application that integrated OpenAI assistants, automated data processing from Google Sheets, and generated PDF documents through AWS services. I also built a real-time server health monitoring dashboard that streams live metrics using Socket.IO, demonstrating my ability to create systems that turn raw data into actionable insights. These projects required the same analytical thinking and systematic approach that effective SEA management demands.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
