I am writing to apply for the Technical Recruiter â Engineering position at constellr GmbH. Your mission to deliver high-accuracy thermal intelligence from space for climate resilience and security is both ambitious and technically demanding. I am drawn to the challenge of helping a multidisciplinary team scale by finding the right engineering talent to build the world's first commercial thermal infrared constellation.

As a software engineer with experience across full-stack development, AI, and autonomous systems, I bring a strong technical lens to recruitment. I understand what it takes to evaluate candidates for complex engineering roles because I have worked alongside the very profiles you are hiring. This technical grounding allows me to assess not just skill alignment, but also communication style, motivation, and cultural fit with technical teams.

In my professional experience, I have collaborated closely with hiring managers and technical leads to define role requirements, review candidate suitability, and support structured hiring processes. I am comfortable navigating shifting priorities in a scaling organisation and maintaining a calm, professional approach under pressure. I also bring experience working in international and cross-cultural environments.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my technical insight and recruitment approach can support constellr's growth.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
