I am writing to apply for the Staff Software Engineer (m/w/d) position at Sharpist GmbH. The idea of building a hybrid coaching experience that combines human empathy with an AI Coach is genuinely interesting to me. I believe technology should enhance human connection, not replace it, and Sharpist's mission reflects that balance.

My background is in full-stack development with TypeScript, React, Node.js, and MongoDB, which matches the core of your stack. I have worked extensively with Next.js on the frontend and Express on the backend, building scalable APIs, real-time features, and role-based systems. I also use Docker for containerization and have deployed applications on Google Cloud and AWS. Monitoring tools like Prometheus and Grafana are familiar to me from maintaining production systems.

What stands out to me about this role is the emphasis on end-to-end ownership: defining the problem, writing the PRD, shipping the solution, and measuring the outcome. In my professional experience as a Web Developer, I have owned features from concept to deployment. For example, I built an AI-powered financial application where I designed the API architecture, integrated OpenAI assistants, implemented OTP-based authentication via AWS SES, and deployed the system on EC2 with Nginx. I worked directly with stakeholders to scope requirements and iterated based on real feedback.

I also use LLMs as a core part of my workflow. I prompt for specs, evaluate generated code for correctness and edge cases, and iterate quickly. I understand that the hard part is not the coding itself but knowing when an abstraction is wrong or when a shortcut will create problems later. That judgment comes from shipping real products and learning from what breaks.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to Sharpist's engineering team.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
