I am writing to apply for the Analyst Umwelt-, Energie- & Nachhaltigkeitsmanagement position at Accenture. Your focus on environmental strategy, data-driven reporting, and continuous improvement of management systems aligns with my technical background in building scalable monitoring and reporting solutions.

Through my work as a full-stack developer, I have designed and implemented systems that collect, process, and visualize real-time data. One relevant example is a real-time server health monitoring dashboard I built using React, Node.js, Socket.IO, and Docker. This system streams live metrics to the browser, supports role-based access, and provides structured reporting on system availability and performance. The architecture required careful data handling, clear reporting interfaces, and reliable uptime.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am currently pursuing a Bachelor of Science in Software Engineering at Voronezh State University of Forestry and Technology, Russia, where I focus on building reliable, data-aware systems.

I have attached my CV for your review and welcome the opportunity to discuss how my skills can support Accenture’s environmental and sustainability initiatives.

Sincerely,

Md Shahanur Islam Shagor
