I am writing to apply for the Blockchain Developer - Base role at Spoon. Your platform combines AI-powered data extraction with a token-based incentive layer and on-chain verification, which is a compelling intersection of technologies. The opportunity to own the full blockchain integration scope for the MVP phase is exactly the kind of hands-on, additive work I seek.

Through research and development work, I designed a privacy-preserving blockchain framework for autonomous vehicle networks. This project involved building a tamper-proof communication layer using SHA3-256 cryptographic chaining, integrating Zero-Knowledge Proofs for anonymity, and implementing post-quantum cryptography for long-term resilience. While this was not a production blockchain deployment, it gave me a strong foundation in smart contract logic, cryptographic primitives, and secure distributed system design.

In my professional experience as a Web Developer, I have built and integrated RESTful APIs, implemented authentication and role-based access control, and worked extensively with Next.js, Node.js, TypeScript, and MySQL. I have deployed applications on Linux servers using Docker and Nginx, and I am comfortable extending existing schemas and building new API endpoints without disrupting live pipelines. These skills directly apply to the backend integration and frontend wallet layer work described in your requirements.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background aligns with your MVP goals under NDA.

Sincerely,

Md Shahanur Islam Shagor
