I am writing to apply for the Systemadministrator/-in position at Black Forest Production GmbH. Your focus on building efficient, scalable digital processes and automation aligns well with my technical background and approach to system administration.

Through my professional experience, I have developed strong skills in Linux server administration, Docker containerization, and web server management using Nginx and Apache. I have set up CI/CD pipelines, configured monitoring tools, and maintained production environments on cloud platforms including AWS and Google Cloud. This technical foundation allows me to manage infrastructure reliably and troubleshoot issues efficiently.

One area that particularly interests me is process automation and system monitoring. I have built real-time server health monitoring dashboards using Node.js, Socket.IO, and Python, which stream live metrics to the browser and provide instant visibility into system status. I also have experience with Docker Compose for containerized deployments and Nginx for reverse proxy configuration. These skills directly support the responsibilities of developing, maintaining, and optimizing digital processes and automation scenarios.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am confident that my hands-on experience with system administration, automation, and digital process optimization would allow me to contribute meaningfully to your team. I have attached my CV for your review and look forward to discussing how I can support Black Forest Production GmbH’s digital infrastructure goals.

Sincerely,

Md Shahanur Islam Shagor
