I am writing to apply for the Fachinformatiker/-in position at Black Forest Production GmbH. Your focus on building efficient, scalable digital processes and smart automation within a growing marketing agency resonates with my own approach to software engineering and process optimization.

Through my professional experience, I have developed a strong foundation in building and optimizing digital systems. I have worked extensively with Laravel and Next.js to create full-stack applications, and I have integrated various third-party services and APIs to automate workflows. My understanding of modern tools and my ability to think in terms of processes and automation align with the responsibilities of this role.

One area that particularly interests me is the development and maintenance of automated scenarios and integrations between tools. In previous projects, I have built systems that connect databases, handle real-time data streaming, and automate notifications and reporting. I am comfortable working with APIs, setting up monitoring and troubleshooting pipelines, and ensuring that processes run reliably. I also have experience with Linux server administration, Docker, and Nginx, which supports the technical infrastructure side of the role.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to Black Forest Production GmbH’s digital infrastructure and automation efforts.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
