I am writing to apply for the Senior Go Backend Developer position at the company you are partnering with in Hamburg. The opportunity to work on a large-scale data platform serving hundreds of millions of users globally aligns directly with my experience in building scalable backend systems.

My technical background includes Go, distributed systems, and microservices architecture. I have worked with MySQL, PostgreSQL, and Redis for database optimization and have experience deploying cloud-native applications using Docker, Kubernetes, and AWS. I have also built real-time systems using Socket.IO and event-driven patterns.

Through my professional experience as a Web Developer, I designed and developed scalable applications, built RESTful APIs, implemented authentication and role-based access control, and optimized database performance through query tuning and caching strategies. I have deployed and maintained applications on Linux servers with Nginx and CI/CD pipelines.

One area that particularly interests me is designing distributed systems that handle high concurrency and real-time data processing. My work with microservices and event-driven architectures has given me practical experience in building systems that scale reliably under load.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background fits this role.

Thank you for your consideration.

Sincerely,

Md Shahanur Islam Shagor
