I am writing to apply for the Senior SAP Developer position at Pertemps ERP. While my professional experience is rooted in full-stack web development using Laravel, PHP, and modern JavaScript frameworks, I bring strong software engineering fundamentals, database design skills, and a systematic approach to building and integrating complex systems.

In my work, I have developed and maintained scalable web applications using Laravel and MySQL, focusing on clean architecture, secure authentication, and role-based access control. I have built and integrated RESTful APIs, optimized database queries, and implemented caching strategies to improve performance. These skills translate well into enterprise environments where structured development, integration, and system reliability are critical.

I have experience working with Linux servers, Docker, Nginx, and CI/CD pipelines for deployment and maintenance. I am comfortable analyzing requirements, writing technical documentation, and collaborating with cross-functional teams to deliver solutions that meet business needs. I also have experience with third-party integrations, real-time features, and payment gateways.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my background in software development and systems integration can contribute to the SAP Central Procurement projects at Pertemps ERP.

Sincerely,

Md Shahanur Islam Shagor
