I am writing to apply for the Junior Data Scientist position at Why Hiring. Your focus on connecting talented individuals with remote opportunities aligns with my own experience working across international teams and delivering AI-driven solutions.

Through research and development work, I have built practical AI systems that operate in real-world conditions. One example is WVAB (Wireless Vision-Aid for the Blind), a system I designed that uses YOLOv8n for real-time object detection, custom UDP streaming for low-latency video transmission, and multilingual text-to-speech for audio feedback. The entire pipeline runs offline on edge hardware, demonstrating my ability to deploy machine learning models in constrained environments.

In addition to computer vision, I have worked on AI-powered applications that integrate large language models for intelligent assistance. I developed backend APIs using Express, TypeScript, and OpenAI to power AI assistants trained on domain-specific datasets. These systems handled voice-to-text processing, automated document generation, and real-time data retrieval, giving me practical experience in building end-to-end AI workflows.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in AI and software engineering can contribute to Why Hiring.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
