I am writing to apply for the Data Entry Specialist role at Somewhere. I understand this is a full-time remote position supporting a growing US-based company, and I am interested in contributing to your team with reliable and accurate data management.

Through my work as a software engineer, I have developed strong habits around data accuracy, organization, and consistency. I have worked extensively with databases including MySQL and PostgreSQL, where I regularly handled data entry, validation, and querying tasks. This experience has given me a practical understanding of how to maintain clean, structured data in production environments.

In previous projects, I was responsible for managing large datasets, ensuring data integrity, and performing regular updates and corrections. I am comfortable working independently with minimal supervision and maintaining focus on repetitive tasks without compromising quality. I also have experience using tools like Git for version control and Linux for file management, which supports efficient workflow organization.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my background in data management and software engineering can support the needs of your team.

Sincerely,

Md Shahanur Islam Shagor
