I am writing to apply for the People Operations role at Nabis. Your mission to build a technology-first platform for the cannabis industry is impressive, and I am drawn to the ownership-driven culture described in the job description.

My background is in software engineering, where I have spent years managing complex, cross-functional projects from scoping through delivery. This experience has given me strong organizational instincts, the ability to hold multiple priorities simultaneously, and a data-driven approach to decision-making. I am comfortable breaking big initiatives into actionable tasks, assigning ownership, and following through until completion.

One area that particularly interests me is the emphasis on training and employee development. In my previous roles, I have been responsible for building and maintaining systems that required clear documentation, onboarding processes, and knowledge sharing across teams. I understand the importance of creating consistent, high-quality experiences for new team members and continuously improving those processes based on feedback and data.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
