I am applying for the Junior Application Support Specialist position at dexter health. Your mission to reduce administrative work in healthcare through AI-powered software is something I find genuinely meaningful. I want to be part of a team that builds technology that directly helps caregivers focus on people rather than paperwork.

This role sits at the intersection of customers, product, and engineering. That is exactly the kind of environment where I work best. I have a solid technical background in full-stack development, databases, and system monitoring. I am comfortable reading logs, checking timestamps, tracing API calls, and understanding what happens inside a system when something goes wrong. I do not shy away from technical details.

In my professional experience as a Web Developer, I regularly investigated bugs, reviewed system logs, and coordinated with team members to resolve issues. I learned to structure problems clearly, document findings, and communicate status updates to both technical and non-technical stakeholders. I am used to taking ownership of open issues and following them through to resolution.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am looking for a role where I can combine my technical understanding with structured thinking and clear communication. I believe this position at dexter health is a strong fit. I have attached my CV for your review and look forward to hearing from you.

Sincerely,

Md Shahanur Islam Shagor
