I am writing to apply for the Associate Business Development - CEO Office position at 1KOMMA5°. Your mission to build an intelligent, integrated energy system using Heartbeat AI is exactly the kind of ambitious, real-world challenge I want to contribute to.

While my background is in software engineering, I have consistently taken on project coordination and cross-functional leadership responsibilities. In my role at Explo-IT, I worked closely with stakeholders and engineering teams to deliver web applications from concept to deployment. This required managing timelines, coordinating between product and technical teams, and ensuring deliverables met quality standards.

One area that particularly interests me is the product launch and market entry aspect of this role. I have experience taking projects from initial planning through to go-live, including building project structures, roadmaps, and reporting frameworks for management. I am comfortable working in fast-growing environments where priorities shift and ownership matters.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can support the CEO Office in driving strategic projects at 1KOMMA5°.

Sincerely,

Md Shahanur Islam Shagor
