I am writing to apply for the Cloud Implementation Specialist (gn) position at Proemion. Your focus on delivering secure telematics solutions that give OEMs full control over their machine data aligns closely with my experience in building and integrating cloud-based systems for real-world applications.

Through my professional experience as a Web Developer, I have worked extensively with web service APIs, authentication and authorization protocols, and web-browser technologies. I have built and integrated RESTful APIs using Laravel, Node.js, and Express, implemented secure authentication flows with JWT and OAuth, and deployed applications on cloud infrastructure including AWS and Google Cloud. This technical foundation allows me to confidently handle the integration of cloud services with customer infrastructure.

I also bring practical experience with Python for data analytics and machine learning. I have developed systems using YOLOv8 for real-time object detection and built data processing pipelines that run on edge devices. My understanding of cybersecurity fundamentals comes from research on secure communication protocols, blockchain-based frameworks, and privacy-preserving architectures for autonomous systems. These skills directly support the DataScience project coordination and security considerations mentioned in the role.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am interested in Proemion’s mission to make machine data usable, reliable, and valuable across entire organizations. I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to your Field Application Engineering Team.

Sincerely,

Md Shahanur Islam Shagor
