I am writing to apply for the Platform Engineer - Identity & Access Management position at Muxon. The opportunity to manage and evolve the internal platform and identity landscape for a health-tech company that builds AI-driven clinical software used in hospitals is genuinely compelling to me.

My professional experience has centered on building secure, scalable systems with a strong focus on access control and automation. I have implemented role-based access control (RBAC) policies, authentication workflows, and audit-ready systems across multiple full-stack applications. This includes managing user provisioning, configuring secure API access, and enforcing policy through scripting and infrastructure-as-code practices.

One area that aligns closely with this role is my work on a multi-vendor e-commerce ecosystem, where I designed and deployed a role-based access control system spanning customers, sellers, delivery agents, and logistics teams. This involved managing user lifecycles, configuring permissions, and ensuring secure data access across different user tiers. I also administered Git-based platforms and collaborated on tooling and vendor management.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in platform engineering and identity management can contribute to your team.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
