I am writing to apply for the Prozessingenieur position in the aviation sector at PTR - Profi Talent Recruitment UG. The opportunity to contribute to the optimization of complex manufacturing processes in a forward-looking industry aligns well with my engineering background and analytical mindset.

Through my work in software engineering and autonomous systems, I have developed a structured approach to analyzing systems, identifying inefficiencies, and implementing sustainable improvements. I am comfortable working with cross-functional teams, including engineering and quality, to ensure processes remain stable and robust. My experience with process documentation and standardization supports the responsibilities outlined in this role.

One area that particularly interests me is the application of lean methodologies and continuous improvement techniques. In my previous roles, I have consistently focused on optimizing performance, reducing waste, and improving system reliability. I am familiar with root cause analysis and structured problem-solving methods that are directly applicable to production process optimization.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills and experience can contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
