I am writing to apply for the IT-Systemadministrator position at ITconfig/all GmbH. With a strong foundation in Linux system administration, server management, and network infrastructure, I am prepared to contribute to the administration and optimization of your client's IT environment.

Through my professional experience as a Web Developer, I have gained practical expertise in managing Linux servers, configuring Nginx and Apache, deploying applications with Docker, and setting up CI/CD pipelines. I have also worked with monitoring tools like Prometheus and Grafana to ensure system stability and performance. These responsibilities have given me a solid understanding of server operations, backup processes, and IT security practices.

One area that aligns well with this role is my experience in maintaining and monitoring server infrastructure. I have managed application deployments, handled system updates, and ensured data integrity through regular backup and recovery procedures. I am comfortable working with virtualized environments and have a structured approach to troubleshooting and documentation.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in system administration and IT infrastructure can support your team.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
