I am writing to apply for the Senior IT Projekt Manager position at citema systems GmbH. Your focus on Cyber Security, KI, and Blockchain, combined with system-relevant software projects, aligns closely with my technical background and project experience.

Through my work delivering full-stack applications and coordinating between business, security, and engineering teams, I have developed a practical approach to managing complex IT projects. I am comfortable structuring ambiguous requirements into actionable technical concepts, facilitating agile workflows, and maintaining clear communication across all levels of an organization.

One area that particularly interests me is the intersection of IT security and workplace infrastructure. In previous projects, I have worked with Linux-based environments, implemented authentication and role-based access control systems, and ensured compliance with security best practices. I understand the importance of balancing security requirements with usability for different user groups.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my project management and technical experience can contribute to citema’s workplace redesign initiatives.

Sincerely,

Md Shahanur Islam Shagor
