I am writing to apply for the Agent position at Kier Group. My background in full-stack development and AI engineering, combined with hands-on experience in building scalable systems, aligns well with the responsibilities of this role.

Through my professional experience as a Web Developer, I have designed and developed full-stack applications using Laravel, Next.js, and Node.js. I have built RESTful APIs, implemented authentication and role-based access control, and integrated payment gateways. I have also optimized database performance and deployed applications on Linux servers with Docker and Nginx.

One project that reflects my technical approach is the Multivendor E-commerce Management Ecosystem, where I developed a Laravel-based backend with MySQL, Redis, and role-based access control. The system connected customers, sellers, and delivery agents through multiple Flutter applications, demonstrating my ability to build complex, multi-role platforms.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
