I am writing to apply for the Staff Product Manager Product Information Management position at HighLevel. Your platform’s scale â processing billions of API hits and supporting millions of businesses across 150+ countries â is impressive, and the opportunity to build the foundational catalog layer that powers all commerce activity is exactly the kind of infrastructure challenge I find compelling.

My professional experience centers on designing and building scalable full-stack systems. Over the past four years, I have worked extensively with Laravel, Next.js, Node.js, and MySQL to develop production applications that handle complex data models, multi-tenant architectures, and real-time communication. This technical foundation gives me a practical understanding of how catalog systems, variant modeling, and pricing logic operate at the implementation level.

A relevant example is the multi-vendor e-commerce ecosystem I built using Laravel and Flutter. This platform required designing product catalogs with multiple variants, managing price lists across different seller roles, and implementing role-based access control for customers, sellers, and delivery agents. The system handled inventory, order routing, and multi-channel distribution, which directly relates to the PIM infrastructure work described in this role.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in building scalable catalog infrastructure aligns with HighLevel’s commerce roadmap.

Sincerely,

Md Shahanur Islam Shagor
