I am writing to apply for the Social Media Manager position at Crypto.com. Your focus on blending creativity with data-driven insights to drive digital presence and community engagement is exactly the kind of challenge I want to take on.

My professional experience is rooted in software engineering, but I have developed a strong understanding of AI tooling and data-driven workflows through my work building AI-powered applications. I have integrated AI assistants, trained models on custom datasets, and used APIs to automate content-related processes. This gives me a practical, hands-on perspective on how AI can support content strategy, trend harvesting, and performance optimization.

One area that particularly interests me is data-driven optimization. In my development work, I have defined success metrics, monitored system performance, and iterated based on real usage data. I am comfortable setting OKRs, conducting post-mortems, and using insights to improve outcomes. I also have experience managing multiple projects simultaneously and collaborating with cross-functional teams to maintain consistency and quality.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my background in AI-driven development and project management can support Crypto.com's social media strategy.

Sincerely,

Md Shahanur Islam Shagor
