I am writing to apply for the Berechnungsingenieur Strukturanalyse position at MY Humancapital GmbH. While my core expertise lies in software engineering and autonomous systems, I bring relevant analytical and Linux skills that align with the requirements of this role.

Through my work on autonomous systems and UAV projects, I have developed strong capabilities in system modeling, parameter definition, and performance analysis. I have designed and tested navigation architectures that required defining boundary conditions, analyzing failure mechanisms, and optimizing system behavior under varying operational scenarios. This analytical approach to complex technical systems is directly transferable to structural analysis and FEM calculations.

A relevant example is my work on the Wireless Vision-Aid for the Blind project, where I built a real-time object detection system using YOLOv8n. This required defining processing parameters, analyzing latency and accuracy trade-offs, and optimizing the system for reliable performance under real-world conditions. The structured methodology I applied there mirrors the analytical rigor needed for evaluating components and assemblies in structural analysis.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my analytical skills and Linux experience can contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
