I am writing to apply for the Coordenador de Marketing Criativo position at Kˆsper. I understand this is a creative marketing coordination role, and while my primary expertise is in software engineering, I bring a strong foundation in building visually compelling, user-centered digital experiences that directly support creative campaigns and content production.

Through my professional experience as a Web Developer, I have designed and developed responsive, SEO-friendly interfaces using Next.js, React, Tailwind CSS, and TypeScript. These projects required close attention to design consistency, user engagement, and cross-platform usability, all of which are essential in a creative marketing context. I am comfortable translating creative concepts into functional, polished web experiences.

One area that particularly interests me is the intersection of technology and creative storytelling. In my work on the Travel Agency App for 2Expedition, I built a multi-language, multi-currency platform with Google Maps integration and a clean, modern UI. This project required balancing visual appeal with practical functionality, much like the work a creative marketing team does when producing high-quality content for diverse audiences.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my background in building user-focused digital platforms can contribute to Kˆsper's creative marketing efforts.

Sincerely,

Md Shahanur Islam Shagor
