I am writing to apply for the Analista de Software Sˆ“nior position at Banco BV. Your focus on building resilient, cloud-native systems for financial engineering, combined with the integration of Generative AI, aligns closely with my technical experience and interests.

Through my professional experience, I have designed and implemented scalable microservices and cloud-native architectures. I have worked extensively with Docker and Kubernetes for container orchestration, and I have deployed and maintained applications on Google Cloud Platform. My approach emphasizes CI/CD automation, system observability, and building fault-tolerant distributed systems.

One area that particularly interests me is the challenge of ensuring data integrity and high availability in distributed architectures. In previous work, I built a real-time server health monitoring dashboard using Node.js, Socket.IO, and Docker, which tracked system metrics and latency across multiple endpoints. This project required implementing robust error handling, real-time data streaming, and a fully containerized deployment pipeline, giving me practical experience with the kind of resilience and observability this role demands.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and welcome the opportunity to discuss how my experience in building scalable, observable systems can contribute to Banco BV’s engineering team.

Sincerely,

Md Shahanur Islam Shagor
