I am writing to apply for the TEST JOB AD 2 position at TEST. With a background in full-stack web development and a focus on building reliable, user-facing systems, I am prepared to contribute to your team.

My professional experience spans Laravel and Next.js for building scalable web applications, along with Node.js, React, and TypeScript for API development and responsive UI. I have worked on authentication systems, role-based access control, database optimization, and real-time features using WebSockets. These skills align well with the responsibilities of determining and developing user requirements for production systems.

In previous work, I developed and maintained RESTful APIs, integrated payment gateways, and deployed applications on Linux servers using Docker and Nginx. I also focused on performance tuning through query optimization and caching strategies. This experience has given me a practical understanding of how to translate user needs into working, maintainable software.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and welcome the opportunity to discuss how my background fits the needs of your team.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
