I am writing to apply for the Operations Administrator position at RECSEEKERS. The role's focus on managing operations in a fully remote edtech environment aligns with my experience in building and maintaining production systems.

Through my professional work as a Web Developer, I have gained hands-on experience with server administration, deployment workflows, and system monitoring. I have worked extensively with Linux servers, Nginx, Apache, Docker, and CI/CD pipelines to ensure reliable application delivery. My familiarity with databases such as MySQL and PostgreSQL, along with tools like Prometheus and Grafana, allows me to track system health and respond to operational issues efficiently.

In previous roles, I was responsible for deploying and maintaining web applications, optimizing database queries, and implementing caching strategies to improve performance. I also managed real-time features and integrated third-party services, which required careful coordination between development and operations. These experiences have given me a solid foundation in maintaining stable and scalable systems.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
