I am writing to apply for the Senior Backend Engineer Studio AI position at Creative Fabrica. Your platform serves millions of creators worldwide, and I find the challenge of building reliable, scalable backend systems for a creative audience particularly compelling.

My professional experience centers on backend development with Laravel, Node.js, and Express, where I have designed and built RESTful APIs, implemented authentication and role-based access control, and worked with both MySQL and PostgreSQL databases. I have also integrated real-time communication using Socket.IO and optimized application performance through query tuning and caching strategies.

In previous work, I developed scalable web applications where I was responsible for the full backend lifecycle: from API design and database schema planning to deployment on Linux servers using Docker and Nginx. I have also worked with Redis for caching and used CI/CD pipelines to streamline releases.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my backend engineering experience aligns with the needs of Creative Fabrica’s Studio AI team.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
