I am writing to express my interest in the Customer Solutions Technician position at Johnson Controls. While the full job description is still being finalized, I understand this role involves delivering technical support and solutions to customers. My background in full-stack development and systems engineering has given me a strong foundation in troubleshooting, problem-solving, and building reliable systems that meet user needs.

Through my professional experience as a Web Developer, I have worked extensively with Laravel, Next.js, React, and Node.js to build and maintain scalable web applications. I have designed RESTful APIs, implemented authentication and role-based access control, and integrated payment gateways and third-party services. I am comfortable working across the full stack and have experience deploying applications on Linux servers using Nginx, Docker, and CI/CD pipelines.

One area that particularly interests me is the opportunity to apply my technical skills in a customer-facing capacity. I have experience collaborating with stakeholders to understand requirements, troubleshoot issues, and deliver solutions that align with business needs. Whether it is optimizing database queries, debugging production issues, or improving application performance, I approach each challenge with a focus on reliability and user satisfaction.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills can contribute to the Johnson Controls team. Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
