I am writing to apply for the VP GM East & Control position at Mast-J˄germeister US. While my background is in software engineering rather than spirits sales, I bring a strong analytical and execution-oriented mindset that aligns with the data-driven responsibilities outlined in this role.

Through my professional experience as a Web Developer, I have developed a systematic approach to problem-solving and performance optimization. I have built and maintained scalable web applications using Laravel and Next.js, focusing on clean architecture, efficient database queries, and reliable API integrations. This technical foundation has trained me to think in terms of measurable outcomes, continuous improvement, and structured execution.

One area that particularly interests me is the emphasis on using data to drive business decisions. In my previous work, I have designed systems that track key metrics, analyze ROI, and provide actionable insights. I am comfortable working with analytical tools and translating data into clear, practical strategies. I also have experience deploying and maintaining applications on Linux servers with Docker and CI/CD pipelines, which has given me a disciplined approach to reliability and accountability.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
