I am writing to apply for the Werkstudent (m/w/d) Power BI & Power Apps position at S01 Projektmanagement GmbH. Your focus on digitalization and automation in energy infrastructure projects aligns well with my background in building efficient, data-driven systems.

Through my work as a full-stack developer, I have developed a strong foundation in data modeling and workflow automation. I have worked extensively with databases such as MySQL and PostgreSQL, designing schemas and optimizing queries to support reporting and operational tools. My experience with automation extends to building CI/CD pipelines and containerized deployments using Docker, which has given me a structured and analytical approach to process improvement.

One area that particularly interests me is the opportunity to support the development of Power Apps applications and automate workflows using Power Automate. While my direct experience is with web technologies and backend systems, I have consistently demonstrated the ability to quickly learn and apply new tools. My background in building real-time features with Socket.IO and managing data flows between systems provides a solid technical base for contributing to your project controlling and reporting systems.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to your team at S01 Projektmanagement GmbH.

Sincerely,

Md Shahanur Islam Shagor
