I am writing to apply for the Design Manager (Data Centres) position at Black & White Engineering. Your firm's reputation for delivering complex mission-critical infrastructure across Europe is well regarded, and I am interested in contributing to the design and delivery of high-profile data centre projects in Frankfurt.

My background is in software engineering and systems architecture, with a focus on building reliable, scalable, and secure systems. I have hands-on experience with Linux server administration, Docker containerization, Nginx and Apache configuration, and cloud deployment on AWS and Google Cloud. These skills are directly relevant to understanding the operational and infrastructure requirements of data centre environments.

One area that particularly interests me is the coordination of technical deliverables across multiple disciplines. In my professional experience, I have worked as a focal point between clients, developers, and stakeholders, managing design programmes and ensuring that project objectives are met on time. I am comfortable identifying risks, managing dependencies, and maintaining clear communication across teams.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments. I am also willing to relocate to Frankfurt and ready to integrate into your European operations.

I have attached my CV for your review. Thank you for considering my application, and I look forward to the possibility of contributing to Black & White Engineering's continued success in the data centre sector.

Sincerely,

Md Shahanur Islam Shagor
