I am writing to apply for the Senior Credit Risk Specialist position at Gratitude Jobs Ahead HR INC. While my professional background is in software engineering rather than banking, the analytical rigor, process-oriented thinking, and reliability required in this role align closely with the skills I have developed throughout my career.

In my work as a full-stack developer, I have managed complex systems that demand precision, coordination, and accountability. I have built and maintained scalable applications, optimized database performance, and ensured data integrity across multiple platforms. These responsibilities required the same kind of analytical thinking and attention to detail that credit risk management demands.

One area that particularly interests me is the structured approach to problem-solving. In software engineering, I regularly assess systems from multiple perspectives, identify risks, and implement solutions that balance technical and business considerations. This mirrors the process of evaluating distressed loans, developing recovery strategies, and making decisions within regulatory frameworks.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my analytical and process-oriented skills could contribute to your credit risk team. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
