I am writing to apply for the Steuerberater position at Taxtalente.de. While my professional background is in software engineering rather than tax consulting, I bring strong digital expertise that could support a modern, digitally-driven tax firm. I am open to applying my technical skills in a new domain and contributing to a forward-thinking team.

Through my professional experience as a Web Developer, I have built and maintained scalable web applications using Laravel, Next.js, React, and Node.js. I have developed RESTful APIs, implemented secure authentication and role-based access control, and integrated payment gateways. I have also worked with MySQL, PostgreSQL, and Redis to optimize database performance. These skills align well with firms that value digital processes and modern technological infrastructure.

One area that particularly interests me is building systems that improve operational efficiency. In my previous work, I delivered real-time features such as chat, notifications, and live updates using WebSockets and Socket.IO. I also deployed applications on Linux servers with Nginx, Apache, and Docker, and set up CI/CD pipelines for smooth deployment workflows. I am comfortable working with digital tools and automating repetitive tasks.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my digital expertise could contribute to your partner firm in Mˆ¶gglingen.

Sincerely,

Md Shahanur Islam Shagor
