I am writing to apply for the Corporate Commercial Paralegal Fully position at Leadenhall Search & Selection. While my professional background is in software engineering, I have extensive experience building systems for highly regulated environments, including financial platforms that required strict data integrity, role-based access control, and secure authentication mechanisms.

Through my work as a Web Developer, I have designed and developed full-stack applications using Laravel, Next.js, and Node.js, with a strong focus on security, compliance, and data protection. I have implemented authentication systems, payment gateways, and role-based permissions in production environments, ensuring that sensitive data is handled according to regulatory standards.

One area that particularly interests me is the intersection of technology and compliance. In my projects, I have built AI-powered financial applications that process sensitive user data, generate PDF term sheets, and communicate via secure email services. These systems required careful attention to data privacy, audit trails, and secure API integrations.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in building secure, compliant systems can contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
