I am writing to apply for the Financial Controller (Accounting & Controlling) position at BELKAW GmbH. While my professional background is in software engineering, I have developed strong analytical, process-oriented, and data-driven skills that are directly applicable to financial controlling and accounting coordination.

Through my work on an AI-powered financial application, I designed and built the complete backend system using Express, TypeScript, and MongoDB. This involved architecting secure data flows, integrating OpenAI for intelligent financial analysis, and automating document generation and delivery via AWS SES. The project required a deep understanding of financial data structures, cost tracking, and automated reporting workflows.

In my professional experience as a Web Developer, I regularly analyzed system performance metrics, optimized database queries, and developed dashboards that provided clear visibility into operational and financial data. I am comfortable working with complex datasets, identifying trends and anomalies, and presenting findings in a structured, actionable format.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my analytical and technical skills can contribute to the financial controlling team at BELKAW GmbH.

Sincerely,

Md Shahanur Islam Shagor
