I am writing to apply for the Testingenieur:in / Softwareentwickler:in position at wabcon. The opportunity to work on quality assurance and test automation for secure communication systems used by public safety organizations is genuinely interesting to me.

Through my professional experience in software development, I have built and deployed full-stack applications using technologies like Laravel, Next.js, and Node.js. This development background gives me a practical understanding of how software is built, which directly supports effective testing. I am comfortable working with CI/CD pipelines, Docker, and Linux-based server environments.

One area that particularly interests me is test automation and pipeline development. I have experience setting up deployment workflows and maintaining server infrastructure using Docker, Nginx, and Apache. I understand the importance of robust software quality and am comfortable analyzing issues, prioritizing fixes, and working with development teams to improve delivery.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in software development and testing can contribute to your team.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
