I am writing to apply for the Systems V&V Engineer - Testautomatisierung im Rahmen vernetzter Funktionen position at Verolt Technology Solutions GmbH. Your focus on next-generation automotive software, connectivity, and cybersecurity aligns with my technical background and research interests in autonomous systems and secure communications.

Through my academic and project work, I have developed strong programming skills in C++ and Python, both of which are object-oriented languages you require. I have designed algorithms for test data generation and automation routines, and I have experience executing tests and evaluating results to ensure functionality and quality. My systematic and structured approach to problem-solving supports the test design and automation responsibilities outlined in this role.

One area that particularly interests me is the shift from domain-based E/E architectures to software-defined vehicles. In my research on secure UAV systems, I have worked on designing resilient communication protocols and fault-tolerant architectures, which has given me a solid understanding of how software-defined systems operate in complex, networked environments. I am comfortable working with IT concepts such as software architectures and cloud services, and I apply interdisciplinary thinking to solve technical challenges.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my skills and experience can contribute to Verolt’s work in automotive innovation.

Sincerely,

Md Shahanur Islam Shagor
