I am writing to apply for the All Other Roles position at Collate. Your approach to using AI tools to support the hiring process while keeping final decisions human reflects a thoughtful balance between technology and judgment, which I find genuinely interesting.

My background spans full-stack development, AI engineering, and autonomous systems, giving me the flexibility to contribute across multiple technical areas. I have built scalable web applications using Laravel, Next.js, React, and Node.js, and have integrated AI capabilities into production systems, including OpenAI-powered assistants and computer vision pipelines with YOLOv8.

In previous work, I developed a real-time server health monitoring dashboard using Node.js, Socket.IO, and Docker, and built a multi-vendor e-commerce platform with Laravel, Flutter, and role-based access control. These projects required me to work across the full stack, from database design and API development to responsive UI and deployment on Linux servers.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to Collate.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
