I am writing to apply for the Junior Human Resources Assistant position at Helic & Co. This remote role caught my attention because it values organization, motivation, and the ability to work independently, qualities I have developed throughout my career as a software engineer working across international teams.

While my professional background is in full-stack development, I have consistently worked in roles that demanded strong organizational skills, clear documentation, and effective communication with diverse stakeholders. At Explo-IT, I collaborated remotely with team members across different time zones, managed project timelines, and maintained detailed technical documentation. These experiences have given me a structured approach to task management and a reliable workflow that I believe applies well to HR operations.

One area that particularly interests me is the opportunity to support people operations in a remote-first environment. I am accustomed to working independently, communicating clearly through written channels, and keeping meticulous records. My experience coordinating between developers, clients, and management has taught me how to handle sensitive information with discretion and maintain professional boundaries.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my organizational skills and remote work experience can contribute to your team.

Thank you for your consideration.

Sincerely,

Md Shahanur Islam Shagor
