I am writing to apply for the Director of Operations role at Robots & Pencils. The opportunity to contribute to a company known for blending strategy, design, and engineering is one I find genuinely compelling.

My professional experience spans full-stack development, system architecture, and operational workflow design. I have built and deployed scalable web applications using Laravel, Next.js, and Node.js, and managed production infrastructure with Docker, Nginx, and CI/CD pipelines. This technical foundation allows me to understand the operational needs of engineering teams and contribute to process improvements that directly impact delivery quality and speed.

In previous work, I have coordinated across product, design, and engineering stakeholders to deliver features on schedule while maintaining system reliability. I have experience with real-time communication systems, role-based access control, and third-party integrations, all of which require clear operational planning and cross-team coordination.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my background aligns with the operational goals at Robots & Pencils.

Sincerely,

Md Shahanur Islam Shagor
