I am writing to apply for the Project Systems Specialist position at Dart. The role's focus on supporting project management systems, ensuring data accuracy, and enabling data-driven reporting aligns well with my technical background and experience in systems support and web development.

Through my professional experience, I have developed strong working knowledge of SQL, HTML, CSS, and JavaScript â technologies directly relevant to maintaining and improving project systems. I have also worked with C# and have familiarity with reporting and dashboard tools, which supports the reporting needs described in the job description. My ability to monitor system performance, respond to user queries, and collaborate with IT teams has been a consistent part of my workflow.

In previous roles, I provided day-to-day technical support for web applications, assisted in maintaining system administration policies, and contributed to QA/QC measures for data accuracy and system integrity. I am comfortable working with multiple project teams simultaneously and ensuring that systems align with project goals and deadlines. My experience deploying and maintaining applications on Linux servers with Nginx and Docker has given me a solid foundation in system reliability and performance monitoring.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to the Project Operations team at Dart. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
