I am writing to apply for the Manufacturing Manager position at Eaton. While my background is in software engineering and systems development, I bring strong technical discipline, data-driven decision-making, and cross-functional collaboration experience that can support the operational and IIoT-focused responsibilities of this role.

Through my professional experience, I have built and maintained scalable web applications using Laravel, Next.js, and Node.js, and deployed them on Linux servers with Docker, Nginx, and CI/CD pipelines. I have developed real-time monitoring dashboards and data visualization tools that track system health, latency, and availability, which directly relates to the IIoT dashboard and Tier 1/Tier 2 metric review responsibilities described in this position.

One project that aligns well with the IIoT aspects of this role is the Real-Time Server Health Monitoring system I built. It streams live metrics to the browser using Socket.IO, supports role-based access, and was fully Dockerized for production deployment. This experience in building real-time data pipelines and visual dashboards can support the shop floor connectivity and performance tracking systems at Eaton.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and welcome the opportunity to discuss how my technical and operational background can contribute to Eaton’s manufacturing goals.

Thank you for your consideration.

Sincerely,

Md Shahanur Islam Shagor
