I am writing to apply for the Safety & Compliance Engineer position at Falk Defence GmbH. Your work on advanced missile, guided projectile, and launch systems for military applications is directly relevant to my research focus on secure, resilient autonomous systems. The opportunity to contribute to system safety and compliance in a defense technology environment is one I find genuinely compelling.

Through my research and development work, I have focused on building secure communication frameworks and safety-critical systems for autonomous platforms. One area that particularly interests me is the intersection of system safety and cybersecurity. My project on OmniGuard V2X involved designing a privacy-preserving blockchain framework for autonomous vehicle networks, where I worked on data integrity, tamper-proof communication, and resilience against cyber threats. This required structured documentation, risk analysis thinking, and an understanding of how technical decisions impact system-level safety.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I understand that this role requires a structured, documentation-focused approach and familiarity with compliance processes. My academic background in software engineering, combined with hands-on project work in secure systems, has prepared me to take on responsibilities such as supporting certification processes, building compliance workflows, and communicating with relevant authorities.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in secure systems and safety-oriented development can contribute to Falk Defence’s mission.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
