I am writing to apply for the Senior Principal Systems Engineer position at Falk Defence GmbH. Your work on advanced missile and launch systems for defense applications is technically demanding and strategically important. I am drawn to the challenge of architecting mission-critical systems where reliability, precision, and cross-disciplinary integration are essential.

My engineering background is rooted in systems thinking and practical integration of complex technologies. Through research and development work on secure UAV systems, I have designed and validated system architectures that span navigation, communication, and real-time control. This includes defining requirements at system and subsystem levels, coordinating across hardware and software domains, and ensuring technical consistency throughout the development cycle.

A relevant example is my work on a privacy-preserving blockchain framework for autonomous vehicle networks, where I was responsible for system architecture, cryptographic integration, and validation of secure communication protocols. This project required trade-off analysis between performance, security, and real-time constraints, as well as coordination across embedded systems, networking, and software components. The experience reinforced my ability to manage technical complexity across multiple disciplines.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my systems engineering experience can contribute to Falk Defence’s next-generation defense systems.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
