I am writing to apply for the Senior Software Developer position at Falk Defence GmbH. Your work on missile, guided weapon, and launch systems for defence applications is technically demanding and strategically important. The opportunity to develop safety-critical flight software, ground systems, and test infrastructure for next-generation defence technology is exactly the kind of challenge I want to take on.

My engineering background spans both software development and autonomous systems. Through research and development work, I have built real-time systems for UAV coordination, secure communication protocols, and sensor integration using platforms such as Raspberry Pi, ESP32, and NVIDIA Jetson Nano. This work required me to think carefully about reliability, latency, and system behaviour under constrained conditions, which maps directly to the safety-critical software environment at Falk Defence.

One area that particularly interests me is building interfaces between military command systems and onboard flight software. In previous projects, I have designed and implemented secure communication layers using encryption and authentication mechanisms to prevent unauthorised access and data tampering. I have also developed test software and operator interfaces for demonstration and validation purposes, ensuring that systems are not only functional but also verifiable and well-documented.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am confident that my combination of software engineering skills, autonomous systems experience, and structured approach to quality and documentation would allow me to contribute meaningfully to your team. I have attached my CV for your review and welcome the opportunity to discuss how I can support Falk Defence’s mission.

Sincerely,

Md Shahanur Islam Shagor
